

NOW WALL-TO-WALL WARMTH WITH THE ALL NEW **HANIMEX THERMALAIRE HEATER**

Old-type room heaters just wait for air to pass by, heating a little at a time and letting warm air move up slowly to the ceiling (of all places)! Now "Thermalaire's" up-to-date tangential® system completely outmodes old "radiator" or "convector" heating. Overseas,

millions of English, European and North American homes have changed to the new tangential type of heating unit.

"Thermalaire" gently takes in cold air, heats it on internal elements, and rolls it out in a continuous "carpet" of warmth—wall-to-wall.

You get faster, far more efficient heating with less power wastage. Have safe warmth by the roomful; any room you like, because "Thermalaire" is easily portable. Enjoy year-round comfort and convenience with the new Hanimex "Thermalaire" tangential heater.

"65 THERMALAIRE," only £16/10/-. Unconditionally guaranteed — even against accidental damage.

• Heats whole room

• A "fan" for summer

• Use as clothes dryer

• All-weather control

* More air heated more evenly. New design transverse blower in "Thermalaire" rolls air across elements, then, hot air across your room rapidly but with minimum turbulence. (See diagram left.)
