

# **How to bring exciting new colour styling to your kitchen using Formica Fashion Plates**

## **"DO IT YOURSELF" INFORMATION**

The Fashion Plates are retained on the doors by the "Picture Frame" trims. The bottom door trims to retain the plates must be purchased from the Kelvinator Parts Division quoting the model number of your refrigerator.

The thickness of Formica required is 1.5 mm (1/16"). Cutting the Fashion Plates is very important in order to obtain perfect fit. Using the dimensions shown on the reverse side of this card, have the plates cut slightly larger than the sizes shown and sand them back to obtain the correct fit inside the Picture Frame trims.

Before fitting the plates to the doors, remove the freezer door handle (when applicable) and the door stops from under the bottom edge of the doors. Thoroughly clean the underside of the doors with methylated spirits.

To fit the plate to the door, enter one edge under the recessed trim and carefully bow out the plate until it can enter the trim on the opposite side.

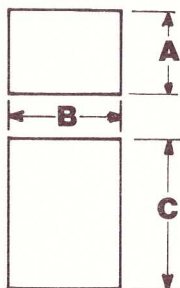

To fit the door trims along the bottom of the door, remove the protective backing from the adhesive strip, position trim carefully, and press firmly to the underside of the door. Refit the door stops and freezer door handle.
