

Hydraflame

... the unchallenged leader

The Hydraflame is the only heater in the world with these features:

1. **Fa^r radiation at floor level**

The glowing radiants give off astonishing heat to keep your feet warm. Twin rotor fans increase warm air circulation when required.

2. **World-patented stainless steel burner**

Vulcan has the exclusive manufacturing rights for this smokeless blue flame burner. For the same amount of heat the Hydraflame costs 5/- per week less to run than any other oil heater.

3. **Proven automatic electric ignition**

Tested over many thousands of units already installed.

4. **Nation-wide installation and service**

Backed by over 700 registered Vulcan Installers, trained for quality installations and after-sales service.

These are just some of the reasons why people often say that their Hydraflame is the best thing they have ever bought . . . Ask any family that owns one.
